DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to a multi-function semiconductor module comprising an image sensor, memory containing biometric attribute, classified in class 348, subclass 231.99.
 - II. Claims 17-22, drawn to a method of transacting commerce comprising entering a product description including a price into a communication device, classified in class 705, subclass 14.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions is that the invention Group I does not use the method of a transaction commerce which enters a product description including a price into a communication device.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2612

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
